ABSTRACT

The Online Restaurant Management System provides convenience for the customers. It overcomes the disadvantages of the traditional queuing system. This system increases the takeaway of foods than visitors. Therefore, this system enhances the speed and standardization of taking the order from the customer. It provides a better communication platform. The users' details are noted electronically. This System set up menu online and the customers easily places the order with a simple mouse click. By using the food menu online anyone can easily track the orders, maintain customers' database and improve food delivery service. This system allows the user to select the desired food items from the displayed menu. The user orders the food items. The payment can be made online or pay-on-delivery system. The users' details are maintained confidential because it maintains a separate account for each user.

ACKNOWLEDGEMENTS

First of all, we are thankful to Prof. Brajesh Sir for his blessings for the successful completion of our project. The pleasure that accompanies the flourishing achievement of any task would be shortened without the mention of people whose continual cooperation made it possible, whose constant guidance and encouragement crown all efforts with success.

We would like to express our gratitude to our respected Prof. Santosh Sir for the guidance, inspiration and constructive suggestions that helped me in the preparation of this project. Although, he was always loaded with several other activities, he gave us more than enough time in this work. He not only gave us time but also proper guidance and valuable advice whenever we faced with some difficulties. His comments and guidance helped us in preparing my project report.

We are also thankful to all of our teachers of the department who helped us in a number of ways by providing various resources and moral support.

Last but not the least, we are grateful to our parents, who are, always with us in our every step of life.
